Percolator 51VN86

Automatic Coffee Urn 6DHC2

Percolators & Coffee Urns

These units brew large quantities of coffee to serve many people at one time. They require an outlet to operate.

Percolators—The reservoir is manually filled with water and coarsely-ground coffee is evenly distributed over the filter plate. As the heating element brings the water to a boil, the water travels up the spout and passes over the coffee grounds before dripping back into the reservoir, constantly circulating the brewed coffee over the grounds enhancing the beverage's flavor.

Automatic Coffee Urn—Use grounds and filters to make significantly large quantities of coffee at once, accommodating high-volume events.

Brewer 788VT3

Combination Brewer & Dispenser 6DHC5

Dispenser 6DHC7

Iced Tea Brewers & Dispensers

■ **Brewers: 120V AC**

Brewers make large batches of tea and are ideal for school cafeterias, dining halls, or office breakrooms.

Iced Tea Brewers—Brewers make and chill iced tea. Ice tea brewers do not dispense tea. They pair with dispensers, delivering brewed tea into the dispenser to accommodate multiple people at a time. 48UH49 includes glass pitcher. 6DHC6 includes 3.5 gal. dispenser with brew-through lid.

Combination Iced Tea Brewer & Dispenser—Combination brewers make, chill, and dispense large quantities of tea. They require a direct water line connection and cannot be easily moved once installed.

Iced Tea Dispensers—Chill and serve iced tea. They do not brew tea and must be paired with a brewer.
