

### Baseboard Cleaning Holders and Pads

Holders and pads clean dirt, scuff marks, and grime from baseboards and toe kicks. Holders attach to a broom handle to allow workers to clean baseboards without stooping or kneeling, while handheld baseboard cleaning tools have a handle to provide control and reduce hand fatigue. Pads have a rough surface that removes surface dirt, rust, and stains.

3U097, 6XE75, and 6XE77 include one white and one brown pad. Swivel pads are for hard-to-reach areas. 3U097 is threaded for attachment to standard broom handles. 6XE75 and 6XE76 accept threaded, tapered, or straight 1 5/16" broom handles (Handles sold separately on page 1486). 1CJ79 has a built-in handle with hook-and-loop bottom to hold pads firmly in place. 4ZA83 includes an applicator, white polishing pad, and brown stripping pad.

### Floor Finish Applicators and Pads

Applicators and pads apply finishes or protective coatings to wood, stone, concrete, and synthetic flooring. They have a smooth, wide head that evenly spreads finishes and coatings for consistent coverage. Applicators are commonly used with polyurethane finishes to coat wood floors against scuffs and moisture.

Kits include a handle, applicator, tubing, and rectangular pads for applying and spreading finishes or cleaners.

Pads fit on floor finish applicator heads to apply finishes evenly and consistently across floors.

Sponge floor coater sleeves apply water-based wood floor finishes.

A carpet film applicator has a roller that releases a protective film over carpet to protect it from foot traffic.

Floor coater heads attach to floor finish applicator handles and apply finishes to flooring.

Ready-to-use liquid bag floor protectors provide the first layer of protection by filling uneven and porous surfaces and creating a semi-permanent layer with high chemical resistance. Sealers provide the base coat for floor finishes. High gloss finish type.
