Paint Strainers & Holders

Cone Strainers—Sieve out solids left in paint cans to help avoid clumps being applied to substrates. These paper strainers work best when paired with standing strainer holder (45YX65) held over paint buckets as they are deep and hold large quantities of paint. They are single-use only and disposable.

Cone Strainer Holder—Hold paper cone strainers over paint buckets to sieve out impurities from paint.

Paint Strainer Bags—Remove solids, sediments, dried paint chips,

or lumps of pigment from paint to avoid transferring them to surfaces when painting. These bags hang over the edge of paint buckets and return strained paint to the bucket for use.

Pressure Pot Tank Strainers—Made in two-gallon sizes and strain paint into pressure pots before it is sprayed with a commercial paint sprayer. These strainers remove impurities like dust, debris, leaves, and paint pigment clumps that might clog the spraying unit.

Paint Applicator Combination Kits

Combination kits for paint applicators provide the basic tools needed to complete a painting or staining project in one kit, and are often less expensive than buying multiple single items.

SHUR-LINE Paint Edgers & Pads

Paint & Stain Edgers create clean, straight lines of paint along molding and trim without using painter's tape. These tools use disposable pads to spread paint alongside areas that are not intended for paint. They provide better control and less splatter than paint brushes, making them faster to use when cutting edges around ceilings, windows, doors, and in corners. **Refill Pads** replace old, worn pads to help ensure smooth, even paint coverage.
