General Purpose Overboots & Overshoes

General purpose overboots and overshoes are waterproof to keep feet dry and provide some chemical resistance. They can be put on and taken off without removing existing footwear, making them convenient for intermittent use or use by individuals who require orthotics, who want to use their own footwear, or who have other special footwear considerations.

Overshoes

Slip over existing footwear to cover the foot to the ankle to protect the bottom, sides, and top of the foot.

Mid-Calf Overboots

Cover the foot, ankle, and lower leg to the calf. Workers can tuck pants into the overboots to keep pants dry.

Knee-High Overboots

Cover the foot, ankle, and lower leg to the just below the knee to protect workers where splash and water depth are above the ankle and calf. Workers can tuck pants into the overboots to keep pants dry.

Winter Overboots

Winter overboots are worn over existing footwear to keep feet warm and protect them from water, snow, and slush. They are used by service professionals who work outdoors for long periods of time or who might need occasional protection. **Traction overboots for general use** provide secure footing to help reduce slips and falls. **Lightweight overboots** are lighter and more compact than general purpose overboots while providing similar protection from cold.
