Safety Showers with Eyewash Stations

▪ Meet ANSI Z358.1

Units flush chemicals, hazardous materials, and other harmful contaminants from the body, eyes, and face. Showers connect to a plumbed water source and have a hands-free water valve that stays open until manually closed.

Floor-mount safety showers attach to the floor. **Freeze-resistant** units have supply lines and valves that install below the frost line to prevent lines from freezing. They fully drain after use to prevent standing water from freezing.
