

Dial Combination Padlocks

- Stainless steel round lock body
- General security
- 3-digit, single preset combination

Padlocks restrict access to property and open by turning a dial to the correct combination. They don't require users to keep track of a key. They are commonly used in schools, gyms, and health clubs. Master Lock hardened steel shackle padlocks offer BlockGuard antishim technology, which blocks shim tools from opening the lock.

Key-Controlled Dial Combination Padlocks

- Stainless steel round lock body
- General security
- 3-digit, single preset combination

Padlocks open by turning a dial to the correct combination but can also be opened with a key if a user forgets the combination. They are commonly used in schools. Control keys are sold separately and must match the control key code specified by the padlock.

Master Lock hardened steel shackle padlocks offer BlockGuard antishim technology—a unique flat latch technology that blocks shim tools from opening the lock. Locks have the same key as traditional combination lock. 3HWJ5 uses a combination that is easy to remember and dial; ideal for people with disabilities. 1D569 boron shackle features dual ball-bearing locking mechanism. Double-armored stainless steel body with fully recessed dial resists knock-off attempts.

Scrolling Combination Padlocks

- General security
- 4-digit resettable combination, except 14Z331 has a 3-digit combination

Padlocks open by turning a scrolling mechanism to the correct combination. They secure access to property and don't require users to keep track of a key. These padlocks are commonly used on construction equipment, industrial storefront and business gates, and utility boxes.
