Columbia LIGHTING

LED Wall-Mounted Lights

- 120/277V AC
- Dimmable

These lights attach to a wall and shine light down onto floors and surfaces. They are commonly installed over sinks, in sitting rooms, and along corridors. LED lights use significantly less energy than fluorescent lights and have built-in LED arrays so there are no light bulbs to install or replace.

Columbia LIGHTING

LED Stairwell Lights

- 120/277V AC
- Dimmable

45VT37

LED lights mount to the wall in a stairwell to supply constant light at a low level or at full brightness when their onboard sensor detects movement. They help conserve energy by returning to a low-light setting when movement is no longer detected. These lights have built-in LED arrays so there are no light bulbs to install or replace.

Max. Fixture Wattage	Color Temp.	Lumens	Lumens Per Watt	Color Index	Nom. L	Overall Width	Lighting Certification	Series	Item No.

Architectural LED Suspended Lights

- 120/277V AC
- Dimmable

Linear fixtures hang down from the ceiling to provide more light than a pendant fixture and a more refined look than a strip light or wraparound light. They are well suited for open spaces such as offices, education centers, and other customer-facing areas. They use significantly less energy than fluorescent fixtures and have built-in LED arrays so there are no light bulbs to install or replace.
