

## String Lights

String lights set their light heads at intervals along a power cord, which loops onto overhead beams, joists, scaffolds, and pipe that can hold the weight of the lights. They are commonly daisy chained together to get the desired coverage.

## Hanging Lights

Hanging lights suspend from an overhead beam, joist, cable, or pipe that can hold the weight of the light. Their hook or eyelet provides a point of attachment for mounting directly to overhead support or connecting to a hanging cable or other user-supplied hardware that mounts to overhead support.

## LED Hazardous Location String Lights

Illuminate areas where flammable, combustible, or ignitable materials are present. They keep arcs and sparks contained to reduce the risk of becoming a source of ignition for a fire or explosion.
