

Trailer Couplers

Straight-Tongue—Bolt onto trailer tongues for towing. Attach to hitch balls and lock with latches for security.

A-Frame—Couplers are welded onto A-shaped tongues and have latches for secure hookups and disconnections. Commonly used when trailers or campers will be jack supported.

Adjustable—Attach to hitch balls with cam locking pins. Height can be adjusted to ensure proper trailer level for towing.

Gooseneck—Have a self-centering lock plate that fits over hitch balls to engage tow vehicles. Locking handles are accessible from any angle and height can be easily adjusted.

Trailer Jacks

Keep trailer beds level and stable during loading, unloading, and storage.

Powered—Connect to power source to raise and lower trailers with no manual effort needed.

Topwind—Designed with top winding lever. Provides vertical and side load capacity.

Sidewind—Winding lever is on the side for easy raising and lowering. Jacks with wheel base offer mobility and have a sidewind handle that folds and locks into place for storage.
