Pull-Tight Seals
Pull-tight seals are adjustable-length single-use security seals that wrap around handles and latches in shipping containers, trailers, cargo holds, and trucks and snap closed. **Plastic pull-tight seals** can be removed with light tools or by using heavy force. **Plastic tearaway pull-tight seals** don't require a light tool or heavy force to remove.

Strap Seals
Seals are fixed-length single-use security seals that wrap around handles and latches in shipping containers, trailers, cargo holds, and trucks and snap closed in one locking position. **Plastic tearaway strap seals** don't require a light tool or heavy force to remove. **Plastic strap seals** can be removed with light tools or by using heavy force. **Metal strap seals** are stronger and more durable than plastic seals, so they provide a higher level of protection and can be removed with light tools.

Cable Seals
Seals can be set to any length and locked in position, so they can provide a better fit than fixed-length cable locks. Requires a tool to remove it, and when it's cut, it splits into individual strands that can't be resealed.

Bolt Seals
Seals have a bolt that passes through a container or door latch on cargo freight, rail cars, and shipping containers and a cap that snaps on to lock it. Also known as disposable padlocks, these barrier seals require a tool, such as bolt cutter, to remove them.
